

Discover what others don't, what others can't.

Transform the speed and effectiveness of creating opportunity, understanding customers and finding threats and inefficiencies through the power of enterprise AI.

Financial Services

Banks, Insurers, and Card companies all depend on Ayasdi's advanced machine learning technology to supercharge their customer management, detection systems and operational processes.

All delivered day 1 with enterprise class readiness, supported by over 30 patents, a decade of global production and recognition as the pioneer in combining supervised and unsupervised AI at scale.

Financial institutions can now discover the true nature of their operating model, their clients and their exposure to risks:

- Drive **materially significant profit directly to bottom line** with new, regulator approved approaches to optimizing enterprise liquidity ratios and use of operating balances.
- **Discover new customer behavior, sentiment and expectation trends** for product development, customer service and pricing discovery.
- **Discover "unknown unknown" criminal attacks** and malignancies completely missed by both traditional and even current machine learning methods.
- **Optimize Compliance across not one risk, but all of them** - fraud, AML, credit, conduct, market and correlation between them - driving a whole new generation of risk awareness and prediction.

Simply put, using Ayasdi puts basis points on your bottom line, whether in pure profit, increased transparency against risk or increased operational productivity or regulatory confidence.

With a business case supporting an ROI in months rather than years, you should at least give us a call to find out more.

Ask for a 30-minute demo. It'll be a great investment of your time.
